1.1 INTRODUCTION

The Pharmacy Council of New Zealand (the Council) is established under the Health Practitioners Competence Assurance Act 2003 (HPCAA). The Council’s primary role is to protect the health, safety and wellbeing of the public by ensuring pharmacists are competent and fit to practice. The Council is therefore responsible for setting standards for pharmacist education and competence.

As professional practice changes and evolves, so too do the competencies for pharmacists. While the traditional role of pharmacists has been the supply of medicines, more pharmacists are becoming involved in patient-specific services such as Long Term Conditions (LTC) and Medicines Therapy Assessment (MTA). To reflect these changes, competence standards need to be dynamic and subject to review at regular intervals. For example, the competence standards were revised and expanded in 2010 to include elements of cultural competence.

This version of the standards builds on past efforts but includes modifications to improve readability and use-ability. Many existing competencies have been re-grouped into domains of responsibility or professional endeavour, while some new competencies have been added to ensure the standards remain relevant and applicable to the evolving roles and services pharmacists can provide within their scope of practice.
1.2 COMPETENCE STANDARDS

Professional competence is the habitual and judicious use of communication, knowledge, technical skills, clinical reasoning, emotions, values, and reflection in daily practice for the benefit of the individual and community being served.

The process of competence development is a lifelong series of doing and reflecting, and focuses on the behaviours required for effective practice performance. Supported by professional codes of ethics, competence standards describe the skills, attitudes and other attributes (including values and beliefs) attained by an individual based on knowledge and experience. They specify the application of that knowledge and skills to the standards of performance required in a practice setting. Together they enable the individual to practise effectively as a pharmacist. The value of competence standards rests with their capacity to support and facilitate professional practice and growth, in the interests of public safety. They may be expressed primarily as entry level competencies and behaviours but all pharmacists should look to build on these, as the behaviours expected of an experienced practitioner will exceed this level.

Competence standards also demonstrate to the public and other healthcare professionals the key expertise that pharmacists bring to patient care, and the role they play in ensuring the safe and responsible use of medicines.

1.3 WHAT IS A COMPETENCE FRAMEWORK?

If competencies refer to the knowledge, skills, attitudes and behaviours that an individual develops through education, training and work experience, taken together, they form a competence framework which provides a blueprint for describing the competencies and behaviours of pharmacists in their daily practice.

By their nature, competence frameworks must be sufficiently broad-based to allow for universal applicability across all practice settings, but also be sufficiently focused to allow the particular competencies specific to pharmacists to emerge.

---

1.4 PHARMACIST AND INTERN PHARMACIST SCOPES OF PRACTICE

The Pharmacist Scope of Practice describes the patient- and health-related roles that form part of the profession of pharmacy. It also includes non-clinical roles e.g. teaching, policy development, given that these roles also form part of contemporary pharmacy practice for some practitioners. The scope is broad, and because the profession is diverse, an individual pharmacist may only be practising some of the roles described in the scope.

**Pharmacist Scope of Practice**

The practice of pharmacy is necessarily broad and is wider than pharmacists working directly with patients, given that such roles influence clinical practice and public safety. In a clinical role, the pharmacist acts as a medicines manager, providing patient-centred medication therapy management, health improvement and disease prevention services, usually in a collaborative environment. Pharmacists ensure safe and quality use of medicines and optimise health outcomes by contributing to patient assessment and to the selection, prescribing, monitoring and evaluation of medicine therapy.

The practice of pharmacy may include but is not limited to:

- the custody, preparation and dispensing of medicines and pharmaceutical products;
- the selection and provision of non-prescription medicine therapies and therapeutic aids;
- health promotion, including health screening;
- administration of medicines, including injectable medicines;
- researching and evaluating information and providing evidence-based advice and recommendations on medicines and medicine-related health issues;
- teaching and advising;
- policy development;
- management;
- manufacturing; and
- auditing.

**Intern Pharmacist Scope of Practice**

The intern pharmacist, practising under the supervision of a practising registered pharmacist acts as a medicines manager, providing patient-centred medication therapy management, health improvement and disease prevention services in a collaborative environment. Intern Pharmacists ensure safe and quality use of medicines and optimise health outcomes by contributing to patient assessment and to the selection, prescribing, monitoring and evaluation of medicine therapy.

The practice of pharmacy may include:

- the custody, preparation and dispensing of medicines and pharmaceutical products;
- the selection and provision of non-prescription medicine therapies and therapeutic aids;
- health promotion, including health screening;
- the potential for administration of medicines; and
- researching and evaluating information and providing evidence-based advice and recommendations on medicines and medicine-related health issues.
1.5 EIGHT STAR PHARMACIST

To be effective healthcare team members, pharmacists need skills and abilities enabling them to assume many different functions. The concept of the “seven-star pharmacist” was introduced by WHO and adopted by FIP in 2000 in its policy statement on Good Pharmacy Education Practice to cover the roles of caregiver, decision-maker, communicator, manager, life-long learner, teacher and leader. The function of the pharmacist as a researcher has since been added and all these have been addressed in the competence standards.

1. Caregiver: Pharmacists must view their practice as integrated and continuous with those of the healthcare system and other health professionals.

2. Decision-maker: The appropriate, efficacious, safe and cost-effective use of resources (for example, personnel, medicines, chemicals, equipment, procedures, practices) should be the foundation of the pharmacist’s work. Achieving this goal requires the ability to evaluate, synthesise data and information and decide upon the most appropriate course of action.

3. Communicator: The pharmacist is in an ideal position to provide a link between prescriber and patient, and to communicate information on health and medicines to the public and other health professionals. Communication involves verbal, non-verbal, listening and writing skills.

4. Manager: Pharmacists must be able to manage resources (human, physical and financial) and information effectively; they must also be comfortable being managed by others, whether by an employer or the manager/leader of a healthcare team.

5. Life-long-learner: It is impossible to acquire in pharmacy school all the knowledge and experience needed to pursue a life-long career as a pharmacist. The concepts, principles and commitment to life-long learning must begin while attending pharmacy school and must be supported throughout the pharmacist’s career. Pharmacists should learn how to keep their knowledge and skills up to date and how to put them into practice.

6. Teacher: Every pharmacist has a responsibility to assist with the education and training of future generations of pharmacists and the public. Participating as a teacher not only imparts knowledge to others, it offers an opportunity for the practitioner to gain new knowledge and to fine-tune existing skills.

7. Leader: Leadership involves compassion and empathy as well as vision and the ability to make decisions, communicate, and manage effectively. A pharmacist whose leadership role is to be recognised must have vision and the ability to lead.

8. Researcher: The pharmacist must be able to use the evidence base (e.g., scientific, pharmacy practice, health system) effectively in order to advise on the rational use of medicines in the healthcare team. As a researcher, the pharmacist is able to increase the accessibility of unbiased health and medicines-related information for the public and other healthcare professionals.

FIP: Fédération Internationale Pharmaceutique (International Pharmacy Federation)
2.1 FRAMEWORK STRUCTURE

The framework contains six domains, each with a number of competencies. The behavioural statements given for each competency indicate how individuals working in that competency will be behaving in practice.

**Domain 02: Public healthcare**

The Domain encompasses the pharmacist’s awareness of, and contribution to public and preventative health activities, directed at both communities and at individuals. As members of the healthcare team, pharmacists help focus attention on the prevention and management of diseases and other health conditions through the promotion of healthy communities, individuals and environments. Pharmacists provide information, advice and education on health awareness, healthy lifestyles and wellness, and disease prevention and management.

**COMPETENCY 02.1 CONTRIBUTE TO COMMUNITY HEALTH**

**Behaviours**

- **02.1.1** Identifies and supports national and local health priorities and initiatives, including health screening programmes, targeted at reducing health inequities and consistent with the role of a pharmacist
- **02.1.2** Uses knowledge of own community profile to assess key healthcare needs and health inequities and delivers services accordingly, taking into account cultural and social settings
- **02.1.3** Identifies the roles and responsibilities of local community healthcare team members and promotes the role of the pharmacist in addressing healthcare needs in the community

**COMPETENCY 02.2 HEALTH PROMOTION**

**Behaviours**

- **02.2.1** Maximises opportunities for counselling and provides accurate, quality and safe information and advice to individuals and the public on healthy lifestyles and wellness, and disease prevention and control
- **02.2.2** Identifies individuals likely to benefit from specific health and lifestyle advice
- **02.2.3** Provides consistent evidence-based advice to individuals and the public about potential benefits of preventative health activities
- **02.2.4** Informs and advises individuals about relevant programmes relating to health and medicines
- **02.2.5** Employs appropriate tools to clarify and reinforce education and to facilitate behavioural change
As in the past, some domains are mandatory and are indicated accordingly by their numbering i.e. Domains M1 (Professionalism in Pharmacy) and M2 (Communication and collaboration). These mandatory domains allow for academic or non-traditional role pharmacists to retain an Annual Practising Certificate (APC) without having to maintain competence in areas not relevant to their practice.

Some optional domains (O1 – O4) and competencies will effectively become mandatory for many practising pharmacists, particularly where they are in direct-patient care roles. Pharmacists will be able to select single competencies from these optional domains; the Council’s expectation is that peer input for the practice review, according to the CPD framework, will ensure pharmacists are working in domains and competencies relevant to their area of practice, and that their CPD reflects this.

The framework uses a variety of terms such as ‘patient’, ‘individual’, ‘service user’ – all are commonly used in healthcare communication but in different contexts e.g. a service user is a person who uses healthcare resources; a patient is someone with an illness; all patients are service users but not all service users are patients.

**NOTE: The Competencies do not include evidence examples.** The guidance section is intended to assist pharmacists with the interpretation of the competencies and behaviours. Some guidance sections may also include a table to illustrate the continuum of learning and behavioural expectations as a pharmacist’s career progresses.

Each pharmacist will individualise their examples of evidence to the particular role and practice setting in which they work. Throughout their careers many pharmacists will change roles, even if they do not change practice settings. As such, the evidence provided to demonstrate competence over time should also change.
2.2 APPLICATION OF THE FRAMEWORK

The framework has been developed to be flexible and versatile and is relevant to a variety of stakeholders. A prescriptive approach to advising pharmacists how to use the framework has been avoided in favour of providing more general guidance.

Individual pharmacists should use the framework to guide professional development and to help identify their own learning needs through a reflective approach based on the skills and competencies required for their particular professional practice. Peer input for the pharmacist’s practice review, according to the CPD framework, will ensure they are working in domains and competencies relevant to their area of practice.

Universities and providers of pre-registration education programmes will use the framework to inform development of under-graduate curricula and intern training programmes. This will assist new registrants in understanding the professional competencies that will be required of them once registered. It will also allow intern pharmacists an opportunity to integrate their academic training into professional practice.

The framework also provides a useful benchmark for other healthcare professionals, policy-makers, members of the public and others of the key competencies associated with, and expected of pharmacists.
### 2.3 DOMAIN SUMMARY

<table>
<thead>
<tr>
<th>DOMAIN</th>
<th>COMPETENCY</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>MANDATORY</strong></td>
<td></td>
</tr>
</tbody>
</table>
| **M1: Professionalism in Pharmacy** | M1.1 Demonstrate personal and professional integrity  
M1.2 Comply with ethical and legal requirements  
M1.3 Contribute to quality improvement  
M1.4 Practise pharmacy within New Zealand’s culturally diverse environment  
M1.5 Understand Hauora Māori  
M1.6 Make effective decisions |
| **M2: Communication and collaboration** | M2.1 Communicate effectively  
M2.2 Establish and maintain collaborative working relationships  
M2.3 Resolve conflict  
M2.4 Supervise and support colleagues  
M2.5 Facilitate education of colleagues |
| **OPTIONS:** | |
| **O1: Health and medicine management** | O1.1 Consult with the patient  
O1.2 Provide healthcare  
O1.3 Review and manage patient’s medicine therapy  
O1.4 Deliver quality and safe services  
O1.5 Access, evaluate and provide medicines information |
| **O2: Public healthcare** | O2.1 Contribute to community health  
O2.2 Health promotion |
| **O3: Supply and administration of medicines** | O3.1 Assess prescriptions  
O3.2 Dispense medicines  
O3.3 Compound pharmaceutical products  
O3.4 Administer medicines  
O3.5 Provide patient counselling |
| **O4: Leadership and organisational management** | O4.1 Provide leadership  
O4.2 Manage quality improvement and safety  
O4.3 Manage and develop personnel  
O4.4 Provide safe working environment |
2.4. THE COMPETENCE STANDARDS

Domain M1: Professionalism in Pharmacy

Professionalism is encompassed by a set of attitudes, knowledge and skills based on clinical competence, ethics, societal and legal requirements resulting in the application of a range of behaviours. The Pharmacy Council recognises that cultural competence, clinical competence and ethical conduct are integral to professional pharmacy practice.

Cultural competence, or cultural confidence, goes beyond an awareness of or sensitivity to another culture to include the ability to use that knowledge in cross-cultural situations. It includes the development and implementation of processes, procedures and practices that support the delivery of culturally appropriate services.

The Domain includes the behaviours expected of pharmacists in maintaining and extending their professional competence, and in understanding that professional development is a means of advancing their practice.

Pharmacists are expected to demonstrate:

- Compassion, integrity and respect for others;
- Responsiveness to patient needs that supersedes self-interest;
- Respect for patient privacy and autonomy;
- Accountability to patients, society and the profession;
- Commitment to excellence; and
- Sensitivity and responsiveness to a diverse population, including but not limited to diversity in gender, age, culture, race, religion, disabilities and sexual orientation.

</tr>
</tbody>
</table>
GUIDANCE

Practising professionally is an expectation of the public, your colleagues and other healthcare providers. Much of the behaviour expected of pharmacists comes from the privileged position we hold as a result of the confidence and trust placed in us by the public, patients and service users. You must recognise this and understand that it deserves reciprocation through attitudes and behaviours that demonstrate professional integrity and respect for the dignity of others. This is integral to upholding the good standing and reputation of the profession.

- **Professionalism** is not just a nine-to-five thing but extends to all situations where your actions, your demeanour and your regard for others may be noted, which includes your activity in all forms of social media. Although you are free to take advantage of the many professional and personal benefits social media can offer, it is equally important to be aware of the potential risks involved. The Council has published, in collaboration with key pharmacy stakeholders, practical guidance and ethical advice on the use of social media[^3], both for professional and non-pharmacy related purposes.

Professional development should be viewed as a continuum based on post-registration learning. As you learn and gain experience, you will move along that continuum. All pharmacists should demonstrate curiosity about their learning and be able to reflect on and assess the limit of their skills, knowledge and abilities at different stages of their career.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Contribute to quality improvement systems</td>
<td>Demonstrates understanding of the pharmacist role in quality and safety improvement. Implements this appropriately within the workplace.</td>
</tr>
</tbody>
</table>

Professionalism also includes a commitment by you to continually update your skills and knowledge in order to remain professionally competent. To be a professional and a medicines expert, you must continually improve your skills and stay on top of trends in pharmacy practice through continuing professional development and life-long learning.
• Practising pharmacy in New Zealand’s diverse cultural environment will require you to understand the impact that your own identity, including your cultural values, has on your practice as a pharmacist. You should recognise that at times there may be conflict between your professional culture/values and the culture of others, but you need to be competent in dealing with those whose culture differs from your own. Although culture is often considered solely as ethnicity or race, it also includes, but is not restricted to age, gender, sexual orientation, socioeconomic status (including occupation), religion, physical, mental or other impairments and organisational culture. Respecting others from a cultural perspective, whether individually or collectively, means avoiding stereotyping and being aware that general cultural information may not apply to specific individuals. As a pharmacist, you should understand and be able to explain different concepts of health, and use this understanding in working towards achieving optimal health outcomes for all patients. Many cultures incorporate the use of traditional healing and therapies in their treatment, and you should recognise and acknowledge the right of individuals to have health beliefs and practices different to your own. For example, understanding and accommodating where possible the influences of a patient’s culture, such as fasting during Ramadan, may improve adherence to treatment and health outcomes.

• Health inequities are a reality in New Zealand. Increasing your awareness of the nature and extent of health inequities and equity issues within your immediate and extended communities, and advocating for more equitable outcomes will improve the quality of healthcare services and outcomes for patients – when people with the poorest health outcomes do better, everyone benefits. Patients’ cultures affect the way they understand health and illness, how they access healthcare services, and how they respond to healthcare interventions. The population you work with is culturally diverse, and this will be reflected by the many ethnic groups within your community. Understanding your community better and developing relationships with key groups within the community will help in working towards reducing health inequities.

Learning about the impact of pre- and post-Te Tiriti o Waitangi events on the health of New Zealanders and developing working relationships with key Māori stakeholders e.g. Iwi / Hapū / Whānau / Māori organisations, where appropriate, will provide background to help improve Māori health outcomes. This extends to understanding the contemporary application of Te Tiriti o Waitangi through the principles of partnership, participation and protection. Prior to European contact, Māori had a range of world views and practises which have relevance to their current health status. When developing treatment plans for Māori, you should use your knowledge of Māori models of health and core Māori practices including tikanga and kawa to improve relationships and health outcomes.

• Contribute to quality improvement – you have an obligation to maintain a focus on the quality of the services provided regardless of your area(s) of practice. However, having a vision of continuously improving service quality is not sufficient. You also need to know what is required to make the vision a reality. You should have an awareness of appropriate tools and methods available to evaluate the quality of your clinical and/or professional services and to optimise outcomes and minimise risks to service users. Understanding the concept of Clinical governance is part of quality improvement. Clinical governance embodies three key attributes: high standards of care, responsibility and accountability for those standards, and a constant dynamic of improvement. It is about being accountable, taking professional responsibility, having the right systems and processes in place and about continuously improving what you do.
Domain M2: Communication and collaboration

The Health Practitioners Competence Assurance Act (HPCAA) 2003 requires health professionals to communicate in and comprehend English to a level sufficient to protect the health and safety of the public. Pharmacists must be able to communicate effectively, which includes verbal, non-verbal, electronic and written communication so the recipient of the communication receives the intended message. Effective communication enables shared decision-making with colleagues or with other healthcare professionals and with patients and/or their carers.

Collaboration and teamwork also requires effective communication. In an HDC opinion (11HDC01077) the Commissioner noted that "effective care involves appropriate communication with patients and their families. Furthermore, respectful and appropriate communication within teams is essential to ensure safe care". Pharmacists should recognise the roles and skills of other health professionals, and seek to establish co-operative working relationships with all colleagues based on an understanding of, and respect for each other’s roles.

</tbody>
</table>
GUIDANCE

This Domain not only addresses your ability to communicate effectively in English, but also to create, maintain and enhance working relationships with colleagues to provide a mutually supportive environment. “Ineffective communication is the most frequently cited category of root causes of sentinel events. Effective communication, which is timely, accurate, complete, unambiguous, and understood by the recipient, reduces errors and results in improved patient safety”.

- Effective communication encompasses the following skills, but is not limited to:
  - Questioning and exploring;
  - Listening – active listening demonstrates genuine respect and concern for the individual. It involves both verbal and non-verbal aspects;
  - Feedback – to ensure that the message is understood. It can take the form of appropriate questions and asking the individual to demonstrate they understand what you have explained;
  - Empathy – seeking to understand where other people are coming from;
  - Explaining;
  - Over-coming physical and emotional barriers to effective communication, for example speech difficulties, health literacy;
  - Negotiating;
  - Influencing.

Written communication, for example fax, e-mail, letter, memo, referrals, appraisals, labels and instructions must be structured and presented in ways appropriate for each situation and to meet the needs of the receiver.

Good communication is essential for building trust, supporting, motivating and influencing both professional colleagues and patients. Communication styles must be adapted to work through situations arising in practice, for example when liaising with other health professionals to achieve better health outcomes for patients. To optimise your contribution, you must be capable of clear and concise communication of relevant information, and of maintaining rapport with professional colleagues, patients, their whānau and family, and other service users. You should learn the correct pronunciation of names as a sign of respect for all cultures and should understand and be able to describe ways to avoid communication styles (verbal and non-verbal) that might give offence. Wherever possible, kanohi ki te kanohi (face to face) communication should be used with Māori.

- **Collaboration:** most often you will work in an environment that includes others; therefore it is important that you are a ‘team player’. This includes understanding the roles and responsibilities of other team members and how teams work. Respecting the skills and contributions of colleagues and other healthcare professionals in improving outcomes for patients is essential.

---

• **Conflict** is generated where there are opposing views, interests or ideas, and can give rise to tension which can impact on emotional well-being and ultimately on work performance. It can arise in both inter- and intra-professional “teams” and will be experienced to some extent in all workplaces. It is important that you recognise and manage conflict in a constructive manner. In addressing circumstances where conflict exists it is important to recognise that it is not always possible to completely resolve the conflict. It is also important to understand that, depending on the circumstances, you may need to seek additional guidance or support to resolve it.

• **Supervision and education:** supervising and supporting colleagues in the workplace is also included in this domain. You will, at some time, be engaged in supervising the work of students, other pharmacists or that of support staff. In this capacity, you would be expected to assist with and support the performance of supervised personnel. You may have chosen to be an intern pharmacist preceptor which requires additional skills, not only in supervision but in teaching and mentoring.

Education as it relates to this domain is that which sits outside formal university education or study. From graduate level, you have a responsibility to assist with the education and training of future generations of pharmacists. Participating as a teacher not only imparts knowledge to others, it offers an opportunity for you to gain new knowledge and to fine-tune existing skills. Educating colleagues includes others in the healthcare team, where you can use your specific knowledge and skills to enhance their knowledge and skills.

Domain 01: Health and medicine management

The Domain encompasses a pharmacist’s role in providing healthcare advice and treatment to individual patients in response to requests from them or about them. It incorporates the holistic care of patients including assessment, treatment and advice for common minor ailments. The pharmacist is responsible for promoting the safe and appropriate use of medicines, for education and for identifying and referring those patients who require a more comprehensive medical assessment, all within an environment of professional pharmaceutical care. The role may also include selecting, recommending, monitoring and evaluating medicine therapy as part of a healthcare team.

Providing high quality and safe healthcare is the primary goal of the health system and by continually improving the quality of their services, pharmacists will safeguard these high standards of care. In doing so, pharmacists must be mindful of the key principles in the HDC Code of Health and Disability Consumers’ Rights Regulations.

The medicines information competency in this Domain applies primarily to practice-based research. It includes accessing, interpreting, evaluating, compiling, summarising, generating and disseminating information for the purpose of optimising medicine related health outcomes.

COMPETENCY 01.2 PROVIDE HEALTHCARE

Behaviours

01.2.1 Demonstrates a patient-centred care approach to practice
01.2.2 Agrees the goal(s) of treatment with the patient, taking into consideration the patient’s knowledge of their own condition and preferred course(s) of treatment
01.2.3 Accepts and supports the individual’s right to make autonomous decisions
01.2.4 Assists individuals to make informed choices on the selection of appropriate non-prescription or complementary medicines, diagnostic aids or non-medicinal treatment options to meet their needs
01.2.5 Works co-operatively with the patient/carer/family/whānau and other members of the healthcare team as appropriate, within the services provided
01.2.6 Counsels patient on the effective use of diagnostic aids or healthcare products and self-help measures to assist management of symptoms/condition
01.2.7 Provides emergency first aid where necessary, in line with professional role and expertise

COMPETENCY 01.3 REVIEW AND MANAGE PATIENT’S MEDICINE THERAPY

Behaviours

01.3.1 Identifies, prioritises and works to resolve medicines management issues
01.3.2 Applies evidence-based guidelines or protocols to reconcile and review a patient’s medicine therapy
01.3.3 Uses professional judgement to determine whether changes to the medication treatment regimen are needed to improve safety, efficacy or adherence
01.3.4 Liaises with and provides recommendations to the prescriber and/or other healthcare professionals to ensure optimal use of medicines by patients
01.3.5 Educates patient and confirms understanding of the medical condition, required monitoring and/or medication treatment
01.3.6 Recognises and manages adverse drug reactions
01.3.7 Identifies individuals in need of advanced pharmacy services and/or follow-up and refers to appropriate service providers
01.3.8 Encourages and supports individuals to enhance their health literacy and to self-manage their health and medicines, identifying and addressing factors likely to adversely affect adherence

5 If working in a community pharmacy, you must maintain competence in CPR by completing a refresher course through a NZQA-approved provider once every three years. If you are a pharmacist vaccinator, refer to Ministry of Health Immunisation Handbook, Appendix 4 for resuscitation requirements.

GUIDANCE

- **Patient-centred care** is a fundamental tenet of delivering quality and safe services. Although defining patient-centred care is not easy, it relies on you ensuring patients receive high-quality healthcare and that patients’ views and experiences are integral to improvement efforts.

  The key principles underlying patient-centred care are outlined by the Picker Institute:

  - Respect for patient values, preferences and expressed needs;
  - Coordination and integration of care;
  - Information, education and communication;
  - Physical comfort;
  - Emotional support and alleviation of fear and anxiety;
  - Involvement of family and friends;
  - Continuity and transition, and
  - Access to care.

These principles are supported by the ten rights of service users and the duties of providers as outlined in the HDC Code of Consumers’ Rights.

Paying attention to patient preferences and needs will lead to improved outcomes-focused care that optimises the safe and effective use of medicines. By taking direct responsibility for individual patients’ medication-related needs, you can make a unique contribution to the outcome of medication therapy and to your patients’ quality of life.

When providing **Primary healthcare**, your treatment options range from over-the-counter medicines (including Pharmacist Only medicines) and therapies, to common diagnostic and therapeutic aids, advice and counselling. The majority of primary healthcare services will be delivered in an environment of limited health information with which to make a decision. You will need to exercise your professional judgement about the course of action most likely to be of benefit to the patient, which may include collaboration with or onward referral to another health professional.

- **Optimal medicine management** is a patient-centred approach, best characterised as a process that is focussed on helping patients gain the most benefit from their medicines. It is about talking with, and listening to the patient, having honest discussions with them and truly making them part of the decision in relation to their medicines and use of their medicines. In collaboration with the patient and other healthcare providers involved in their care, you can provide the expertise to help optimise medication therapy decisions. You can educate patients, monitor medication therapy and enhance adherence, so playing a key role in improved quality of life for individuals within the community.

---

6 http://pickerinstitute.org/about/picker-principles/ Accessed February 2014
You can take a multidisciplinary approach to the promotion of rational use of medicines by providing proper information and instruction regarding adverse drug reactions, dosing schedules, unwanted effects of medicines and by monitoring such unwanted effects. You have a responsibility for confirming and enhancing a patient’s understanding of their condition and its treatment. In coordination with the wider healthcare team, you can establish a common approach to the rational use of medicines, resulting in improved quality of life for the patient in particular, and for the community in general.

- **Delivering quality and safe services** is an essential element of healthcare practice. Quality improvement processes applied to service development and delivery are by their nature, a continuing process, not a one-off event. They include the principle of continuity of care which is hardly a new idea. In its purest form, continuity of care is simply the essence of good patient care, the rationale for which is that it is:
  - appropriate for patients’ needs,
  - demanded by today’s consumers,
  - an organised way of maximising healthcare resources, and
  - cost-effective for providers, patients, and funders.

It helps you identify ways of coordinating and linking resources to avoid duplication and facilitate seamless movement among care settings or between service providers where necessary. Patients, their carers and service users are particularly conscious of the need to have continuity of care as they traverse the healthcare system. This continuity must apply within your team as well as between you and other service providers.

It may not be possible or appropriate to follow the care of an individual patient every time; but maintaining an on-going professional relationship with the patient is essential for maintaining safe and effective medication management. This is particularly true for patients with chronic medical conditions (for example asthma or diabetes), those on complex or multiple medication regimens, or those being treated with medicines with a narrow therapeutic index. You also have a duty of care to protect patient privacy and confidentiality when recording patient information or when using the information you access.

- **Medicine information**: to practice evidence-based medicine and to provide evidence-based medicines information, you must be able to select and appraise relevant scientific literature, and understand the implications of the findings. You will need to use your professional judgement to determine the clinical significance of the findings and the degree to which they can be applied. If you are using the findings to help optimise care for individual patients, you should also determine the patient’s own preferences and develop an appropriate medicine management plan based on the combination of this information.
Domain 02: Public healthcare

The Domain encompasses the pharmacist’s awareness of, and contribution to public and preventative health activities, directed at both communities and at individuals. As members of the healthcare team, pharmacists help focus attention on the prevention and management of diseases and other health conditions through the promotion of healthy communities, individuals and environments. Pharmacists provide information, advice and education on health awareness, healthy lifestyles and wellness, and disease prevention and management.

### COMPETENCY 02.1 CONTRIBUTE TO COMMUNITY HEALTH

#### Behaviours

02.1.1 Identifies and supports national and local health priorities and initiatives, including health screening programmes, targeted at reducing health inequities and consistent with the role of a pharmacist

02.1.2 Uses knowledge of own community profile to assess key healthcare needs and health inequities and delivers services accordingly, taking into account cultural and social settings

02.1.3 Identifies the roles and responsibilities of local community healthcare team members and promotes the role of the pharmacist in addressing healthcare needs in the community

### COMPETENCY 02.2 HEALTH PROMOTION

#### Behaviours

02.2.1 Maximises opportunities for counselling and provides accurate, quality and safe information and advice to individuals and the public on healthy lifestyles and wellness, and disease prevention and control

02.2.2 Identifies individuals likely to benefit from specific health and lifestyle advice

02.2.3 Provides consistent evidence-based advice to individuals and the public about potential benefits of preventative health activities

02.2.4 Informs and advises individuals about relevant programmes relating to health and medicines

02.2.5 Employs appropriate tools to clarify and reinforce education and to facilitate behavioural change
GUIDANCE

What is public health? The Ministry of Health’s public health workforce website states that, in New Zealand public health takes a population health approach, placing a greater emphasis on community health including:

- the population as a whole
- the role of the community
- health promotion and preventative care, and
- the need to involve a range of professionals

However, a population health approach also takes into account all factors that determine a person’s health and wellbeing.

Health promotion, disease prevention and lifestyle modification are activities at community level that have a public health focus. Pharmacists are easily accessible and can play a key role in providing information and advice to the public on health improvement, and in signposting to other services.

You are a trusted source of information and advice on health and medicines; however your involvement in preventative health care is often unplanned and reactive, and may be the result of an individual requesting health information or education on an ad hoc basis. You cannot operate in isolation and must accept joint responsibility with all health professionals to serve community and public health goals. Being involved in preventative healthcare means working with individuals and communities through education, promotion of healthy lifestyles, and disease management and prevention to protect and improve the health of those communities and individuals.

Domain 03: Supply and administration of medicines

The Domain covers the supply of Prescription Medicines and Pharmacist Only Medicines, including extemporaneously compounded products. It includes a new competency relating to the administration of medicines with a specific behaviour relating to the administration of injectable medicines.

Pharmacists have an independent duty of care to use their professional judgement and apply their expertise to protect and promote the safety, health and well-being of patients and the public. They do this by applying their professional skills and knowledge to optimise the results achieved from the use of Prescription Medicines and Pharmacist Only Medicines, when supplied following receipt of a prescription, medicine order or patient request.

The provision of extemporaneously compounded pharmaceutical products is a professional service involving the use of medication related and/or clinical information and quality assurance processes. This Domain covers the preparation of single or multiple use pharmaceutical products in community and hospital pharmacies, intended for immediate use by a specific patient. Products will be prepared in a range of settings where the available equipment and facilities may vary significantly; however all products must be prepared in accordance with the Health and Disability Services Pharmacy Services Standards NZS 8134.7, relating to dispensing and compounding.

**COMPETENCY 03.1 ASSESS PRESCRIPTIONS**

<table>
<thead>
<tr>
<th>Behaviours</th>
<th>03.1.1</th>

<td>03.2.5</td>
<td>Accurately records details of medication incidents and actions taken, including clinical and professional interventions, to minimise their impact and prevent recurrence</td>
</tr>
<tr>
<td></td>
<td>03.2.6</td>
<td>Maintains the medicine supply chain to ensure the quality of medicines supplied and their safe disposal</td>
</tr>
</tbody>
</table>
### COMPETENCY 03.3 COMPOUND PHARMACEUTICAL PRODUCTS

**Behaviours**

- **03.3.1** Applies knowledge of pharmaceutics when compounding products, including purpose of active ingredients and excipients within formulations, product stability and quality standard required
- **03.3.2** Confirms formulation or uses evidence-based decision making to develop an appropriate formulation where no standard formulation exists
- **03.3.3** Follows professional practices and conventions, and the requirements of the Pharmacy Services Standards for product preparation, including for aseptic preparation where relevant

### COMPETENCY 03.4 ADMINISTER MEDICINES

**Behaviours**

- **03.4.1** Makes clinical assessment of the appropriateness of the medicine for a specific patient in order to administer it or to supervise the patient self-administering
- **03.4.2** Follows relevant policies, procedures and documentation requirements for the administration of medicines
- **03.4.3** Obtains appropriate consent to administer the medicine
- **03.4.4** Complies with national standards and/or professional guidelines where available when administering injectable medicines or supervising medicine dosing

### COMPETENCY 03.5 PROVIDE PATIENT COUNSELLING

**Behaviours**

- **03.5.1** Assesses patients’ needs and knowledge of prescribed medicines, including Pharmacist Only medicines, to identify when additional information and education is required
- **03.5.2** Involves patient’s nominated representative, whānau or appropriate cultural services, where necessary, to better understand patient’s cultural needs and assist a patient in their understanding
- **03.5.3** Provides the patient with sufficient information to ensure the safe and proper use of medicine(s), including effective use of devices
- **03.5.4** Uses a variety of counselling styles and relevant resources to positively impact on adherence with treatment regimen
- **03.5.5** Counsels in a patient-centred manner, ensuring privacy and confidentiality and using language the patient understands
- **03.5.6** Checks patient’s understanding of the advice and counselling given
GUIDANCE

• **Assess and dispense prescriptions** – your responsibility for patient health outcomes is a central pillar of pharmaceutical care. This domain is concerned with the supply of prescription medicines and with your obligations to comply with the prescriber’s intention only in so far as it is consistent with legal requirements and patient safety. The legal requirements for the form of a prescription and processes to confirm prescription validity and patient eligibility will be outlined in your pharmacy’s Standard Operating Procedures (SOP). These SOPs will also outline the technical aspects of the dispensing process.

As a member of the healthcare team you will often liaise with prescribers to clarify a prescription, to discuss therapeutic management issues or to recommend changes to prescribed medicines. In the event of unclear or incorrect prescriptions, prescribing errors, clear contraindications or inappropriate prescribing, you have an obligation to intervene and communicate those concerns to the prescriber. Some of these concerns may result from a clinical assessment of the prescription and although the prescriber is not obliged to accept your guidance, you must act in your belief of benefit to the patient.

• **Compounding** or preparing pharmaceutical products has clearly defined procedures and requirements which are outlined in Health and Disability Services Pharmacy Services Standard NZS8134.7. You should only compound a product when you have a clear idea of the standard the finished medicine has to meet, and can ensure that you have the appropriate equipment, materials and facilities available in which to produce such a product. If the preparation is required to be sterile, you should be familiar with the special requirements of aseptic compounding for sterile preparations and should have appropriate training. You should also review the need for updated training or revalidation as necessary.

The complexity and variety of products will depend on the services provided by your pharmacy. You should carry out all compounding procedures so as to ensure the products are fit for their intended use and do not place patients at risk from inadequate safety, quality or efficacy. The basic concepts of quality assurance, good compounding and dispensing practice and quality control are interrelated. To achieve the quality objective reliably you should have a comprehensively designed and implemented system of quality assurance incorporating good dispensing, compounding, and batch preparation practice and quality control. You should document this quality assurance system and regularly monitor its effectiveness.
• **Administration of medicines** – the majority of times you are asked to administer a medicine will be opportunistic events. Sometimes it may be the result of an emergency situation e.g. a patient needing an adrenaline auto-injector for anaphylaxis, or glucagon for hypoglycaemia. In exercising your professional accountability in the best interests of patients when administering any treatment or medicine you must:

  - Know the therapeutic uses of the medicine to be administered, its normal dosage, side effects, precautions and contra-indications
  - Have considered the dosage, method of administration and route of administration in the context of the patient’s condition and co-existing therapies
  - Check that the patient is not allergic to the medicine before administering it
  - Manage all adverse reactions appropriately and in a timely manner
  - Make an accurate record of all medication administered and advise the individual’s prescriber where necessary.

Policies and procedures relating to the administration of medicines must include awareness and application of hygiene practices, particularly hand hygiene. The Health, Quality & Safety Commission (HQSC) has implemented a national hand hygiene work programme. Information on the programme and educational resources are available on [Hand Hygiene New Zealand](http://www.health.govt.nz/publication/immunisation-handbook-2011). Accessed January 2014

If you are offering immunisation services or administering injectable medicines, you should be familiar with, and abide by any national standards and/or professional guidelines where available.

• **Patient counselling** requires you to take into account not only your expertise to provide medication information, but also to consider the patient as an expert in their life. You have a duty of care to the patient to ensure the prescriber’s intentions are clear, and the patient understands and is able to use the medicine(s) safely and effectively. When advice on providing options for medicine use is needed, what might appear to be the right advice from your perspective may not be right if you make assumptions about the patients’ needs. Understanding the patient’s perspective around medicine use, and giving patient-centric advice ensures the patient receives information relevant to their individual situation.

---

Domain 04: Leadership and organisational management

The Domain includes competencies that relate to the way pharmacists apply management and organisational skills to ensure the effective and efficient delivery of services. Leadership and organisational management are complementary. All pharmacists should undertake a leadership role as well as develop the ability to manage resources (human, physical and financial) and information effectively. Business planning may be part of this.

The Domain also addresses the responsibility of pharmacists to provide an environment where risks to the safety and well-being of personnel and the public are managed and minimised.

COMPETENCY O4.3 MANAGE AND DEVELOP PERSONNEL

Behaviours

O4.3.1 Understands and complies with legal requirements associated with recruitment and performance management processes

O4.3.2 Describes and clarifies duties and responsibilities with individuals

O4.3.3 Supports staff to provide care in accordance with the rights of patients and service users

O4.3.4 Manages human resources and staffing structure appropriate to the functions of the service, and to safely meet the needs of all service users

O4.3.5 Facilitates, supports and contributes to training and continuing professional development of team members

O4.3.6 Applies a standard system for performance management, including poor performance

O4.3.7 Provides team members with access to a complaints management process

COMPETENCY O4.4 PROVIDE SAFE WORKING ENVIRONMENT

Behaviours

O4.4.1 Establishes and promotes a framework for workplace safety and a safe working environment

O4.4.2 Complies with legislation relating to occupational health, welfare and safety

O4.4.3 Provides facilities, equipment and work processes to support staff and service user safety

O4.4.4 Monitors safety in areas of special needs and acts to maintain compliance with accepted practice standards

O4.4.5 Monitors the workplace and work practices to identify and minimise security risks and ensure compliance with workplace safety policies and procedures

O4.4.6 Accepts responsibility for implementing workplace safety procedures in an emergency
GUIDANCE

The competencies in this domain apply equally whether you have been in a leader or management role for some time or if you are a new pharmacy owner/manager. Some of the competencies are also applicable if you have occasion to be appointed Charge Pharmacist.

- **Leadership** is not just top-down; whatever practice environment you work in, you can demonstrate leadership by the way you approach your role, regardless of your level of seniority. Within pharmacy, leadership encompasses a number of skills including identifying challenges and opportunities as they arise, role modelling, mentoring and motivation or extending the team’s value beyond traditional roles. You should seek opportunities to contribute to the ongoing development of the profession, and to work with team members to establish achievable goals and strategies. This may include developing services and a service environment consistent with individual and community needs, emerging trends in professional practice and available resources. You should also recognise the limits that available resources impose on service levels.

- **Manage quality improvement and safety:** all health professionals are expected to regularly review the quality of their services and make improvements where necessary. As the leader you might nominate a team member to oversee the quality and safety improvement plan and review process. A review programme allows you to assess whether a service has reached a specified standard and then, where necessary, to use the information to improve that service. This can be done by carrying out patient surveys, and assessments and reviews against key aspects of the service. It is important to then reassess to make sure the improvements have been achieved and so complete the improvement cycle.

  You should also proactively review your own performance within the context of the services you provide. Risk assessment and minimisation are integral to quality improvement and clinical governance. You need to be aware of and be able to identify the causes and risks of errors, and implement strategies for their prevention or mitigation. This may be as simple as recording and analysing ‘near misses’ in the dispensary and taking steps to mitigate their recurrence, or as complex as re-designing the dispensary to create a more logical and less confusing workflow.

  Managing quality and safe services requires a staffing mix that reflects the community mix and is appropriate to the functions of the services you provide, ensuring sufficient staff are available to provide safe service delivery.

- **Mentoring and developing personnel** is also a leadership and management responsibility. You should have a sound knowledge of performance management processes, including for poor performance, and demonstrate leadership in supporting and developing the professional capabilities of personnel. This may, at times, include identifying and addressing work issues that contribute to workplace stress and providing practical support for impaired pharmacists. You should contribute to the learning and professional development of colleagues, encouraging a commitment to continuous improvement in professional capability.
<table>
<thead>
<tr>
<th>COMPETENCY</th>
<th>CONTINUUM OF PROFESSIONAL DEVELOPMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mentoring and role modelling</td>
<td>Demonstrates understanding of mentorship process and characteristics of a role model to team members</td>

<td>Demonstrates ability to identify and resolve risk management issues using established policies/procedures</td>
</tr>
<tr>
<td>Managing performance</td>
<td>Contributes to performance management processes in accordance with established policies/procedures</td>
</tr>
</tbody>
</table>

- In providing a **safe work environment**, you have a responsibility to develop and implement policies and procedures relating to workplace safety that are consistent with recognised standards. A workplace safety framework should include, but is not limited to management of risks that arise because of the nature of the substances that are found in a pharmacy environment, prevention strategies to minimise risks to staff and service users, and training programmes for staff.
APPENDIX 1 – GLOSSARY

<tr>
<td>Administration of medicine</td>
<td>A generic term for the giving or application of a therapeutic agent to treat a condition, which is usually given orally or by injection.</td>
<td>2</td>
</tr>
<tr>
<td>Carer</td>
<td>Any person responsible for assisting another person, including friends and family members who need help with everyday living because of ill health, disability or old age (see <a href="http://www.carers.net.nz/">www.carers.net.nz/</a>)</td>
<td>3</td>
</tr>
<tr>
<td>Clinical check</td>
<td>Determining the appropriateness of a prescription for an individual patient by assessing it against a number of parameters.</td>
<td>4</td>
</tr>
<tr>
<td>Clinical governance</td>
<td>A framework through which organisations are accountable for continuously improving the quality of their services and safeguarding high standards of care by creating an environment in which excellence in clinical care will flourish.</td>
<td>5</td>
</tr>
<tr>
<td>Collaboration</td>
<td>An interprofessional process of communication and decision making that enables the separate and shared knowledge and skills of team members to synergistically influence the ways services are provided or policies developed</td>
<td>6</td>
</tr>
<tr>
<td>Colleague</td>
<td>A fellow pharmacist or health professional or fellow worker, which includes all persons who work within or are associated with a pharmacist’s practice environment.</td>
<td>2</td>
</tr>
<tr>
<td>Competencies</td>
<td>Significant job related knowledge, skills, abilities, attitudes and/or judgements required for competent performance by members of the profession.</td>
<td>7</td>
</tr>
<tr>
<td>Continuity (continuum) of care</td>
<td>Refers to the coordination and continuity of healthcare for an individual during a movement from one healthcare setting or provider to another as their condition and care needs change during the course of a chronic or acute illness.</td>
<td>8</td>
</tr>
<tr>
<td>Continuous quality improvement (CQI)</td>
<td>Quality Improvement (CQI) is a continuous process that employs on-going cycles of improvement focused on 1) the structure, which represents the attributes of settings where care is delivered; 2) the process, or whether or not good practices are followed; and 3) the outcome, which is the impact of the care on health status. CQI a system that seeks to improve the provision of services with an emphasis on future results. Like total quality management, CQI has an emphasis on maintaining quality in the future, not just controlling a process. It requires the participation of all members of an organisation in improving processes, products, services, and the culture in which they work. The process should empower employees to take responsibility for their own tasks in a way that encourages both continuous learning and personal responsibility. In a health care setting, this means a shift from an emphasis on tasks to an emphasis on outcomes of care.</td>
<td>9 / 10</td>
</tr>
<tr>
<td>Counselling</td>
<td>A two-way communication process between a pharmacist and an individual in which the pharmacist ascertains the individual’s needs and provides him or her with the information required to safely and effectively administer medicines and/or therapeutic devices</td>
<td>11</td>
</tr>
<tr>
<td>Direct patient care</td>
<td>Direct patient care involves the pharmacist’s direct interactions with the patient (and their family, whānau or representative) and his or her [i.e., the pharmacist’s] contributions to the selection, modification, and monitoring of patient-specific medicine therapy. This is often accomplished within an interprofessional team or through collaborative practice with another healthcare provider.</td>
<td>12</td>
</tr>
<tr>
<td>Evidence-based practice</td>
<td>The conscientious, explicit, and judicious use of current best evidence that takes into account the needs and circumstances of each individual. Evidence-based practice is also applicable to decisions about the planning and provision of services. Evidence encompasses a range of qualitative and quantitative methodologies including indigenous methodologies and consumer experiences</td>
<td>4</td>
</tr>
<tr>
<td>Hapū</td>
<td>Sub-tribe or kin group that is linked by a common ancestor. Hapū is also a description for being pregnant</td>
<td>13</td>
</tr>
<tr>
<td>Hauora Māori</td>
<td>Māori health, vigour</td>
<td>13</td>
</tr>
<tr>
<td>Health</td>
<td>A state of complete physical, mental and social well-being and not merely the absence of disease or infirmity</td>
<td>14</td>
</tr>
<tr>
<td>Health inequity</td>
<td>Health inequities are defined as ‘differences which are unnecessary and avoidable, but in addition are considered unfair and unjust’. Inequalities are not always inequities as they may not be avoidable or unfair. Health inequities do not occur naturally and are not random, but are the result of social and economic policy and practices. In all countries, more socially disadvantaged groups have poorer health, greater exposure to health risks and poorer access to health services. Achieving health equity does not mean that resources are equally shared; rather, it acknowledges that unequal resource distribution may be essential to ensure different groups enjoy equitable health outcomes. Equity is an ethical concept based on the principle of fairness, which sees that resources are allocated to ensure everyone has their minimum health needs met.</td>
<td>15</td>
</tr>
<tr>
<td>Health literacy</td>
<td>The degree to which individuals have the capacity to obtain, process and understand basic health information and services needed to make appropriate health decisions</td>
<td>1</td>
</tr>
</tbody>
</table>
Health promotion
The process of enabling people to increase control over their health and to improve their health outcomes. It embraces actions directed at strengthening the skills and capabilities of individuals, and is also directed towards changing social, environmental and economic conditions so as to alleviate their impact on public and individual health.

11

Interprofessional
Interaction amongst health professionals which goes beyond merely having members of different professions sharing an environment together

6

Iwi
Tribe composed of descendants from a specific ancestor(s). A number of related hapu constitute an iwi. (ko)iwi is also a description associated with bones, or human remains

13

Ko te kanohi
Face to face

13

Kawa
Protocol – customs of the marae and wharenui

13

Leadership
The art of influencing the behaviour of others towards a pre-determined goal.

11

Māori
Māori is an English word which collectively describes the indigenous peoples of New Zealand; however it is an introduced word and construct used to homogenise the traditional indigenous societal structures of whānau, hapu and iwi

13

Medicine management
A range of patient-centred services that improve medicines-related health outcomes

13

Medication management plan
A medication management plan is an ever-evolving, long-term record of the interaction between a patient and pharmacist as they work towards the patient’s self-management of medicines and is an integral part of providing pharmaceutical services.

1

Medicine reconciliation
This involves obtaining the most accurate list of patient medicines, allergies and adverse drug reactions and comparing this with the prescribed medicines and documented allergies and adverse drug reactions. Any discrepancies are then documented and reconciled.

16

Mentor
An experienced, skilled and trustworthy person who is willing and able to provide guidance to less experienced colleagues. Mentors share their knowledge, expertise and experience on career, technical, professional and cultural issues. Mentoring is therefore a complex, interactive process occurring between individuals of differing levels of experience and expertise which incorporates interpersonal or psychological development, career and/or educational development, and socialisation functions into the relationship.

4

Multi-disciplinary team
A group of healthcare practitioners with diverse training, skills and competencies who work together as an identified unit or system. (Adapted)

Near miss
“An event, situation, or error that took place, but was captured before reaching the patient.”

18

“Any error that was detected up to and including the point at which the medication was handed over to the patient or the patient’s representative”. 19

Patient-centred
Care that is respectful of and responsive to individual patient preferences, needs and values, ensuring that patient values guide all clinical decisions. It should ensure that patients have the education and support they need to make decisions and participate in their own care.

20

Population health
Population health refers to consideration of the health outcomes or status of defined populations – groups, families and communities – and the distribution of such outcomes within populations. Populations may be defined by locality, or by biological, social or cultural criteria. A population health approach refers explicitly to taking account of all the influences on health (the determinants of health) and how they can be tackled to reduce inequalities and improve the overall health of the population.

21

Public health
The organised local and global efforts to prevent death, disease and injury, and promote the health of populations. The key components of modern public health practice include:

• a focus on whole populations
• an emphasis on prevention
• a concern for addressing the determinants of health
• a multi-disciplinary approach
• partnership with the populations served.

Public health is about population groups rather than medical treatment of individuals, and looks beyond health care services to the aspects of society, environment, culture, economy and community that shape the health status of populations. Good public health is based on creating conditions that enable people to contribute and participate and requires the input of agencies beyond the health sector agencies.
## Quality champion
The person responsible for promoting quality throughout the organisation. The quality champion will:

- plan, implement and advance quality systems at all levels of the organisation;
- oversee and conduct analysis to ensure the organisation meets service user and internal quality standards;
- evaluate procedures, policies, strategies and systems;
- gather and analyse data; and
- make recommendations for improving quality based on the information gathered.

## Risk management
An approach to prevent or mitigate a potential risk through identification, analysis, mitigation, planning and tracking of root causes and their consequences.

## Role model
A person regarded by others generally as a good example to follow with regards to their professional or social behaviour that one can base his or her own behaviour on, including adopting similar attitudes. A role model need not be known personally to the individual.

## Rongoā
Traditional Māori healing. It includes herbal medicine made from plants, physical techniques like massage, and spiritual healing.

## Safety
Being safe and free from abuse, exploitation, danger, risk, harm, or injury.

- **Cultural safety**
  The provision of a service to a person or family from another culture that meets the needs of that culture, as determined by that person or family.

- **Safe environment**
  The environment is free from physical hazards including structures, fittings, as well as harmful compounds and toxic substances. A service also provides a safe environment through a respectful and strength-based approach that places consumers first.

- **Organisational safety**
  Risks within the organisation that have the potential to compromise safety are identified, monitored, evaluated, recorded in a risk register, and managed to acceptable levels.

## Service provider
An individual who is responsible for performing the service either independently, or on behalf of an organisation. This includes the provision of direct and indirect care or a support service to the consumer.

## Service user
A person who uses/ receives a health or disability service. (Adapted)

## Te Tiriti o Waitangi
Treaty of Waitangi: the English text of the document (as distinct from the Māori text, Te Tiriti o Waitangi), signed by the English representative of Queen Victoria and the Māori chiefs present on 6 February 1840

## Tikanga
Correct procedure, custom

## Whānau
Cluster of families and individuals who descend from a common ancestor. Whānau also means giving birth or to be born

## Whanaungatanga
Relationship, kinship, sense of family connection, connectedness

APPENDIX 2 – SCHEDULE

Pharmacy practice is highly regulated by both statute and common law and pharmacists should be familiar with the key regulations, standards and codes listed below. Legislation referred to in this framework includes the following (refers to the latest editions and amendments) Acts and Regulations, Guiding Documents and Codes of Practice that directly or indirectly impact on the professional practice of pharmacy.

Legislation
- Commerce Act 1986
- Consumer Guarantees Act 1993
- Crimes Act 1961
- Fair Trading Act 1986
- Health Act 1956
- Health and Disability Commissioner Act 1994
- Health and Disability Services (Safety) Act 2001
- Health and Safety in Employment Act 1992
- Health Practitioners Competence Assurance Act 2003
- Human Rights Act 1993
- Injury Prevention, Rehabilitation and Compensation Act 2001
- Medicines Act 1981
- Medicines Amendment Act 2013
- Misuse of Drugs Act 1975
- New Zealand Bill of Rights Act 1990
- New Zealand Public Health & Disability Act 2000
- Official Information Act 1982
- Privacy Act 1993

Regulations
- Dietary Supplement Regulations 1985
- Health and Disability Commissioner (Code of Health and Disability Service Consumers’ Rights) Regulations 1996
- Health & Safety in Employment Regulations 1995
- Health (Needles and Syringes) Regulations 1998
- Health Practitioners Competence Assurance (Restricted Activities) Order 2005
- Health (Retention of Health Information) Regulations 1998
- Medicines (Designated Pharmacist Prescribers) Regulations 2013
- Medicines (Designated Prescriber: Nurse Practitioners) Regulations 2005
- Medicines (Designated Prescriber: Optometrists) Regulations 2005
- Medicines (Designated Prescriber – Registered Nurses Practising in Diabetes Health) Regulations 2011
- Medicines Regulations 1984
- Medicines (Standing Order) Regulations 2002
- Misuse of Drugs (Changes to Controlled Drugs) Order 2003
- Misuse of Drugs Regulations 1977

Codes
- Advertising Standards Authority Inc. Code for Therapeutic Advertising 1999
- Health Information Privacy Code 1994
- Pharmacy Council of New Zealand Code of Ethics 2011

Standards
- Health and Disability Services – Pharmacy Services Standard NZS 8134.7:2010
